

JULIE Member Engineering Department Contact

JULIE provides member engineering department contact information to engineer/architect customers who are in the design/planning information stage of a project. These customers are seeking information on the presence of existing utilities in order to design their project and minimize interference with existing utilities. After the customer's phone call to JULIE, where the same information that is communicated on a regular locate request has been given to the JULIE operator, the customer is faxed back a list of engineering contacts for each indicated JULIE member. It is the full responsibility of the customer to contact each JULIE member to discuss the project in detail.

Please indicate your company's engineering department, address and contact information in the spaces provided below. Please **SIGN** the form at the bottom and return to JULIE.

Company Name: _____
