Before Digging On Your Job Site

Pre-mark it!

Identifying your excavation area helps streamline the utility marking process. So before you break ground, pinpoint exactly where you plan to dig. JULIE makes it easy. Use the pre-marking option that works best for you:

- Physically pre-mark using white flags, paint, chalk, lath, or whisksers
- Provide a clear and precise description, either verbally or in writing
- Attach digital files indicating the excavation site, RTE users only
- Use electronic white lining, when available

Scan code to learn more

Remember, safe digging starts with pre-marking. It's the Law!

Key Points Addressed In The New 2025 Law

Notification Timelines:

definitions of days and schedules

Positive Response:

required use of electronic system to check ticket status

Tolerance Zone:

clarification of how to dig near underground utility lines

Reasonable Control:

2 additional days' notice in high volume areas

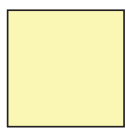

HANG THE PRE-MARKING SIDE OF THIS PIECE AS A POSTER!

Make sure your crews understand that pre-marking is required by law. Stay compliant and post this pre-marking information in a highly visible area in your work space, field office, warehouse, loading dock, or anywhere your team gathers.

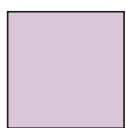

Expert Support Is Just A Call Away

JULIE Damage Prevention Managers (DPMs) are available to help you sift through the Illinois Underground Utility Facilities Damage Prevention Act and offer guidance on best practices for safe digging. Contact the DPM in your area to schedule a safety presentation, toolbox talk, or construction site meeting.
